EDUCATION

Malla Reddy College of Engineering, Hyderabad

Nov 2022 – May 2026

Bachelor of Technology in Computer Science and Engineering

CGPA: 7.5 / 10

Sri Chaitanya Junior Kalashala – Intermediate (Class XII)

2022 | 79.6%

R.R. High School – SSC (Class X)

2020 | 95%

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML, CSS

AI / ML & GenAI: RAG, LangChain, ChromaDB, Google Gemini, OpenAI API, Prompt Engineering, Scikit-learn, NLP

Data Analytics: Pandas, Microsoft Excel, Data Cleaning

Apps & Tools: Streamlit, Streamlit Community Cloud, Google Cloud (AI Fundamentals), Git, GitHub Actions, pytest

INTERNSHIPS & VIRTUAL EXPERIENCE

AICTE – Edunet Foundation (IBM SkillsBuild)

Sept 2025 – Oct 2025

Artificial Intelligence & Cloud Technology Intern (4-week virtual program)

Remote

- Selected and scoped a real-world problem from industry-provided options (generic, costly trip planning for students) and designed an **end-to-end GenAI solution** within a 4-week internship.
- Built and deployed a **Streamlit web page with Google Gemini integration** on Streamlit Community Cloud, taking 6 validated inputs (destination, duration, budget, interests, stay type, requirements).
- Engineered a structured **system prompt** that returns a day-by-day plan with food, stay, transport, an **estimated budget breakdown** and student tips, with automatic retry when the AI service is busy.
- Hardened the app for public release by moving the Gemini API key out of source code into **encrypted Streamlit secrets**, blocking secret files with .gitignore, and documenting setup and safe key handling in the README.

Deloitte – Data Analytics Job Simulation (Forage)

Aug 2025

Virtual Experience Participant

Remote

- Completed data analysis and forensic technology tasks modeled on real Deloitte client scenarios.
- Cleaned and analyzed business datasets in Excel to identify patterns and flag unusual records.
- Summarized the findings as clear, actionable recommendations on business risk and compliance.

PROJECTS

LectureLens – RAG Q&A over YouTube Lectures | Python, LangChain, ChromaDB, Gemini, Streamlit

- Built a RAG (retrieval-augmented generation) app that answers questions from YouTube lecture videos and shows the timestamp where each answer comes from.
- Stored lecture transcripts in a ChromaDB vector database and used Google Gemini with LangChain to answer only from the lecture content.
- Combined keyword search and semantic search to find the most relevant parts of a lecture, and tested the answers on a set of sample questions.

Movie Recommendation System | Python, Pandas, Scikit-learn, Streamlit

- Built a content-based recommender on the TMDb 5000 dataset (4,803 movies) that suggests the 5 most similar movies.
- Combined genres, keywords, plot and production companies into text features, then ranked similar movies with cosine similarity in a Streamlit web app.

Smart Healthcare | OpenAI API, MERN Stack

- Built a health web app where users sign up securely, log vitals such as blood pressure, blood sugar and heart rate, and view their history.
- Added medical report upload (JPG, PNG, PDF) and a map that shows nearby hospitals using the browser's location.
- Integrated an OpenAI-powered chatbot for general health guidance, along with a rule-based chatbot for common questions.

CERTIFICATIONS

- IBM SkillsBuild** – Artificial Intelligence Fundamentals
- Infosys Springboard** – Explore Machine Learning Using Python; Python for Data Science
- Udemy** – Python for Beginners
